

SKILLS

AI & ML	LLMs, LangChain, LangGraph, FAISS, FastAPI, Vector Databases, MLflow, NumPy, Pandas, Matplotlib, MCP
Programming & DB	Python, Scala, SQL, React
Data Engineering	Apache Spark, PySpark, Databricks, Apache Kafka, Hadoop, Hive, Docker, AWS Athena & S3
Tools, BI & Design	Git, Power BI, Figma, Adobe Photoshop
Operating Systems	Linux, Windows

TECHNICAL EXPERIENCE

AI Analytics RAG System Cloud Engineer, AI/ML	Nexturn January 2026 – Present
--	-----------------------------------

- Developed a multi-agent RAG pipeline using **LangGraph** to convert natural language queries into SQL analytics, enabling intelligent and scalable data retrieval.
- Implemented **FAISS**-based schema retrieval for Text-to-SQL generation against **AWS Athena**, streamlining query formulation across complex schemas.
- Built a real-time AI analytics dashboard using **React**, **Plotly**, and **SSE streaming** for live, event-driven data visualization.
- Integrated AI-generated summaries, dynamic chart rendering, and automated **PDF report exports** for end-to-end business reporting.

AI-Powered Recruitment Management System Cloud Engineer, AI/ML	Nexturn January 2026 – Present
---	-----------------------------------

- Built a full-stack recruitment platform with a **FastAPI** backend and **React/Vite** frontend, integrating **OpenAI GPT-4o-mini** for automated resume parsing, prescreening, and AI-based candidate scoring against job descriptions.
- Designed a multi-stage resume ingestion pipeline supporting manual uploads and automated career portal fetching, with **PII masking**, text extraction, and structured candidate normalization.
- Implemented **SharePoint** integration via Microsoft Graph API for resume storage, job description management, and candidate pool export.
- Engineered a resume quality analysis engine with strict gap detection (flags only gaps > 2 months) and education validation, reducing false-positive screening flags.
- Developed an interview scheduling module that sends role-specific HTML invite emails with **.ics** calendar attachments and resume/JD attachments via the **SendGrid API** to candidates, panelists, and TAs.

Data & Machine Learning Engineer Intern February 2025 – December 2025	Nexturn Hyderabad, Telangana
--	---------------------------------

- Developed and evaluated machine learning and deep learning models with emphasis on precision optimization, iterative validation, and performance benchmarking.
- Performed exploratory data analysis and feature engineering with rich visualizations using **Matplotlib**, **Seaborn**, and **Plotly** to surface actionable patterns from raw datasets.
- Assisted in end-to-end model integration and deployment workflows, contributing to production-ready ML pipeline development.
- Music Genre Analysis & Prediction:** Designed an end-to-end data pipeline using **Apache Kafka** for real-time ingestion and **PySpark** for distributed processing; applied **Random Forest** with One-vs-Rest for multi-class genre classification; developed interactive **Power BI** dashboards visualizing genre distribution, popularity trends, and model predictions.

EDUCATION

Master of Technology – Data Science 2023 – 2025	National Institute of Technology, Mizoram
Bachelor of Technology 2020 – 2023	National Institute of Technology, Mizoram
St. Paul’s Higher Secondary School MBSE	Mizoram 2016 – 2020
